About us

Who is Qemat Alwasat?

Qemat Alwasat is an independent Iraqi company that provides communication solutions, information technology and Internet services. There are two branches of the company in Baghdad and Basra.

We are a System Integrator, Communications and Technology provider that is focused on providing end-to-end ICT solutions across industries to the Iraqi market. Furthermore, give complete solutions ranging from consulting and planning, design, implementation to maintenance.

We are authorized by AGCN-International to offer their services in Iraq. They're one of the world's leading providers of vendor independent Information and Communication Technology (ICT) solutions and services to businesses all around world. AGCN-International designs, integrates and manages ICT infrastructures and business solutions for many of the world's largest global and local companies and organizations, helping them maximize the value of their information technology investments.

Business Focus

A 99.9% availability internet service which consider as the best and the fastest in Iraq.

Internet Services Provider
(VSAT & Fiber sources)

E Government

Fiber GPON

Our activities range from the day-to-day management of our clients' ICT infrastructures and applications, through to the development and integration of business applications and innovative and secure networking solutions. We cover the full business and ICT life-cycle: we design, we implement and we manage. Qemat Alwasat offers a focused portfolio of ICT solutions and services based around seven core areas, which reflect the major concerns of our clients. We ensure to only provide the best service we possibly can.

Our solutions portfolio is not static. It evolves continuously with technology and business while core objectives remain constant. The core principle of the portfolio is to question and eliminate complexity.

Qemat Alwasat has the ability to provide internet service in Iraq via fiber optic through Turkey, Jordon, Kuwait and Submarine. A good quality service and professional staff to maintain, diagnose and consulates in our entire nodes to our customers. It is unusual to find this breadth and focus of skills in an organization.

Qemat Alwasat has no technology products of its own to sell, and so we have no desire to lead our clients to a particular product sale. We are international business technologists, whose only reason for being is to make sure our clients get the best business value and performance from

Our values

Our values serve as a compass for our actions and provide the framework for how we do business at Qemat Alwasat. They guide us in everything we do – from key businesses decisions to day-to-day activities in order to deliver real business value to our customer/partners.

Integrity – We espouse integrity in our relationship with our clients and partners.

Respect - We work enthusiastically to protect our clients interests at all times and make it a point to show respect between all people involved.

Passion and commitment – We are passionate about making a difference in the work processes of the clients we serve and are committed to enhancing potentials.

Opportunities – We create working environments and systems where opportunity, innovation and teamwork prevail.

Excellence – we aspire to attain a leading position in the industry and to accomplish excellence for our work and ourselves.

Systems Integration Practice

Solutions

- ✓ Networking.
- ✓ Wireless Integration and Convergence.
- ✓ Security Infrastructures and NAC solutions.
- ✓ Video Surveillance and IPTV.
- ✓ Mobility and Unified Communication.
- ✓ RFID and tracing solutions.
- ✓ Mobile payment and NFC technology.
- ✓ Health solutions
- ✓ Contact Center and CTI.
- ✓ Data Center & Cloud Computing.
- ✓ OSS & BSS.

Enterprise Solutions

- ➔ Communication Service Providers.
- ➔ NGN and Core Networks.
- ➔ Banking.
- ➔ Contact Center & Managed Services.
- ➔ Chemical & Petroleum IPTV & Data Center.
- ➔ Travel & Transportation.
- ➔ Converged Communication.
- ➔ Hospitality.
- ➔ Networking and NFC Technology.
- ➔ Health Mobility and RFID Technology.
- ➔ Ticket Management.
- ➔ Installation Management.

Security solutions

The following security services are available to augment your solution:

- ✓ CCTV and Surveillance systems
- ✓ Visitor Management System
- ✓ Biometric reader
- ✓ Time Attendance System (Proximity / Biometric)
- ✓ Asset Tagging, Bar-Coding and Control
- ✓ Audio / Video Intercom Systems
- ✓ Scanners
- ✓ Access Control System (proximity / Long Range Application)
- ✓ Parking Management Systems
- ✓ Gate Barriers
- ✓ Intrusion Alarm System
- ✓ People Counting Systems
- ✓ Detectors
- ✓ Call for Assistance
- ✓ Aeros Sky Dragon Airship

Qemat Alwasat's MPLS Services:

MPLS is a highly scalable, protocol agnostic, data-carrying mechanism, which creates "virtual links" between nodes on the network, regardless of the protocol of their encapsulated data.

- End-to-End security with a more efficient, private and reliable network.
- Geographic independence.
- Reduces costs by providing a single transport connection.
- Enhances voice, data and video solutions.
- Automates system for billing, ordering and provisioning.
- Helps avoid latency and packet loss.
- Ensures Quality of Service and bandwidth protection.
- Diverts and routes traffic around link failures, congestion and bottlenecks.
- Easier process for upgrading the network to a higher bandwidth.
- Extends the reach of your headquarter's applications to the branch offices, remote workers, customers, suppliers and partners.
- Greater flexibility to support a wide range of access needs, such as the Internet, Intranet and Extranet.
- Reduces network costs for implementation and on-going operations.
- Leverages existing Internet access connections for convergence of multiple applications and traffic types.

Internet Protocol – Virtual Private Network (IP-VPN)

IP-VPN is engineered to support a range of powerful managed application services that can radically improve your business processes and overall operational efficiency.

Virtual Leased Line (VLL)

A point-to-point virtual private network connection, connecting two customer edge devices transparently at two different locations, as if they had a traditional leased line in between.

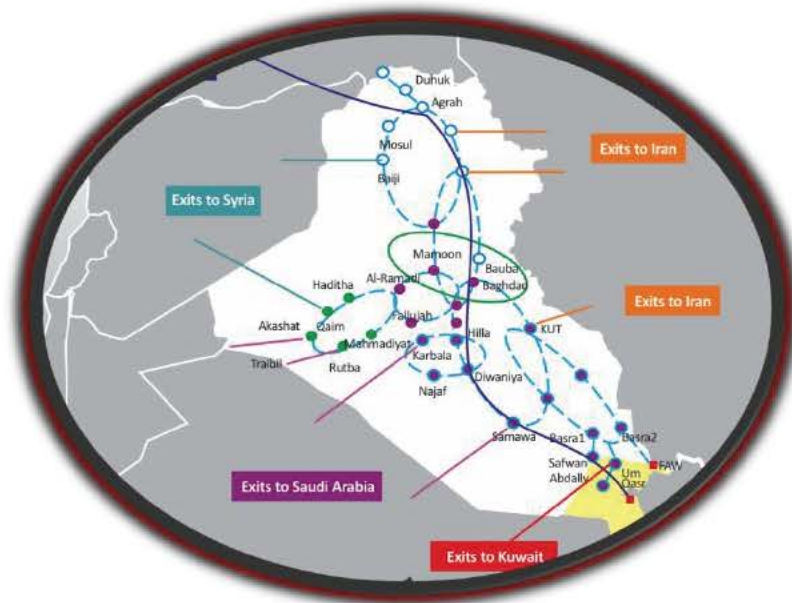

Virtual Private LAN Services (VPLS)

An Ethernet based multipoint-to-multipoint communication, providing connectivity to multiple customer sites in a manner that is transparent to the customer edge devices.

Virtual Private Routing Network (VPRN)

Providing a way to communicate between locations without having to lease traditional circuits, VPRN uses labeled tunnels to create a private WAN (Wide Area Network), for sharing confidential information over an absolute secure path. It enforces privacy through traffic segregation and the isolation of IP routing information per VPRN instance.

Qemat Alwasat has successfully established operations inside Iraq, directly and through business partners, delivering multiple E1s, DS3s and STM1s to meet customer requirements at various locations within Iraq. It involves installing suitable routers at customer locations through a local partner, on their existing IP/MPLS Infrastructure present all over the country. Our MPLS-based last mile connectivity for locations in Iraq are provided over Fiber Optic Cable, Copper or Microwave mediums, subject to their availability.

As a business in today's competitive environment your network is the lifeline for connecting your locations and ensuring access to critical applications. Enterprises are looking to extend the network and applications to every location and employee whether in a corporate location, branch office, or mobile workers with remote work locations.

Virtual Private Networks (VPN) offers the flexibility to connect all employees and applications, anywhere, anyhow regardless of physical location or access type. VPNs deliver the attributes of a private data network within a shared network infrastructure. They offer enterprise-class scalability and reach across multiple IP- based infrastructures, along with many of the performance and security characteristics traditionally found only in dedicated private environments.

Benefits

- Secure, reliable network architecture providing any-to-any connectivity globally
- Management capabilities providing the level of control that you require
- Flexibility to add new locations, applications and features to the network
- Improved application performance using Class of Service to prioritize traffic
- Easily integrate new technologies to existing infrastructure
- Simplify network management with easy to use web-based tools
- Service Level Agreements to support your mission critical traffic
- Secure remote access for the mobile, remote employee
- Single sign-on for all applications, regardless of network connection type
- Consistent, global customer experience

Success stories

We share our clients' ambitions. We work to understand their reality and deliver true results – focusing on strategic decisions and practical actions. We align our incentives with our clients objectives, so they know we are in it together.
