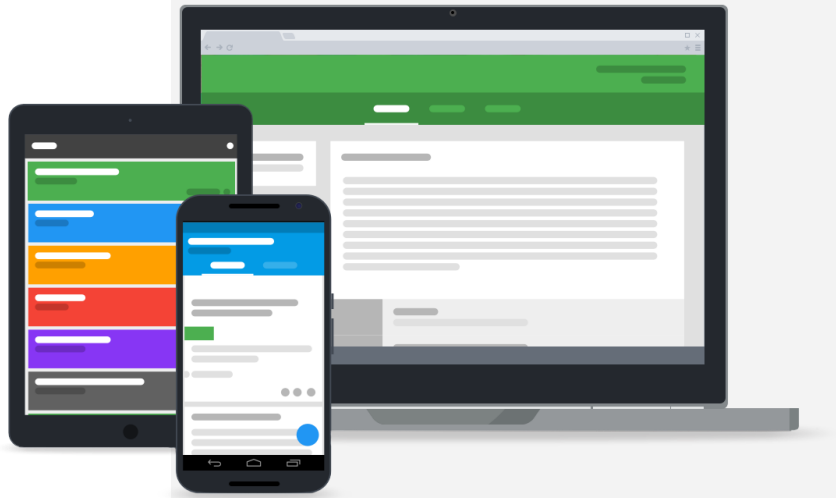
# What is Classroom?

Google Classroom streamlines assignments, boosts collaboration, and fosters seamless communication to make teaching and learning more productive and impactful.

**Instant. Paperless. Easy.**



Google for Education

NEW: AUGUST ‘19

# Google Assignments

Assignments lets you quickly and securely create, analyze, and grade coursework, while empowering students to learn more effectively using the collaborative tools of G Suite for Education.

# Originality reports

Originality reports brings the power of Google Search right to your student assignments and grading interface through Google Classroom and Google Assignments.
The learning tool helps both teachers and students thoroughly review and analyze coursework to make sure it is properly cited and avoid plagiarism.

Originality reports compare student work against a broad range of sources, flags unoriginal content within the document, and links directly to the sources detected. Minimize switching and investigation to save time for richer feedback.

**Rubrics in Google Classroom [beta]**

Create a more effective grading experience by integrating rubrics into your Classroom experience. Classroom now offers a simple, effective rubrics tool that can be customized and embedded into assignments. Teachers can build, view, and grade rubrics, all while demystifying expectations and outcomes for students.

**Gradebook is now available to everyone**

Last November, we released an early access beta program for Gradebook in Google Classroom. Participating teachers are using Gradebook to get a holistic view of student performance over time, so they can gain a deeper understanding of where students have mastered a subject or where they still need more opportunities to improve.

Over the next few days, gradebook will be rolling out to all Classroom users. Teachers will also be able to customize how grades are calculated in their classes (weighted average or total points-based), set up grade categories for assignments, and share an overall grade with students through a host of new class settings.

**Sync grades with your student information system (SIS) and Google Classroom [beta]**

Educators and IT administrators can sign up for the beta to sync grades from Google Classroom to their school information system (SIS), starting with select SISs.
